

Fire Extinguisher and Utility Control Class

Knowing how and when to control the utilities after a disaster can minimize some of the damage due to gas leaks, broken water pipes and arching electrical wires. This class will also teach participants how and when to control utilities such as natural gas, water and electricity. Since fire is the leading danger following an earthquake this course will also include "hands-on" training for using small, portable fire extinguishers .

Date: Saturday, October 28, 2006

Time: 2 hour classes (choose one)

- ☐ 8:30—10:30 AM
